### Part1: Comparator with 741 IC Used as a Level Detector

- Construct the circuit shown below, connect a 500 Hz., 5  $V_{P-P}$  to the input. Sketch the input SIGNAL,  $V_{ref}$  and the output signal on the same graph,

$$V_{ref} = \frac{-12 \cdot R_2}{R_1 + R_2} = \frac{-12 \cdot 1}{10 + 1} = -1.09$$

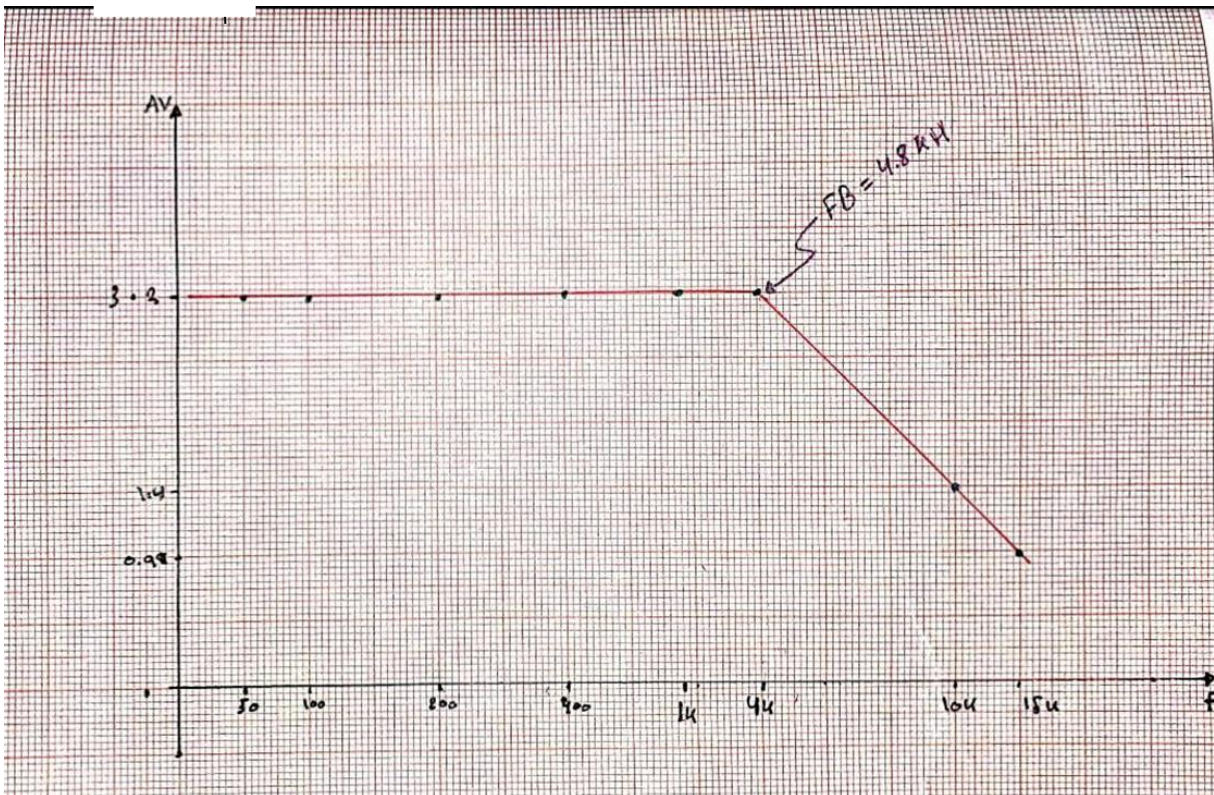

### Part 4: Integrator

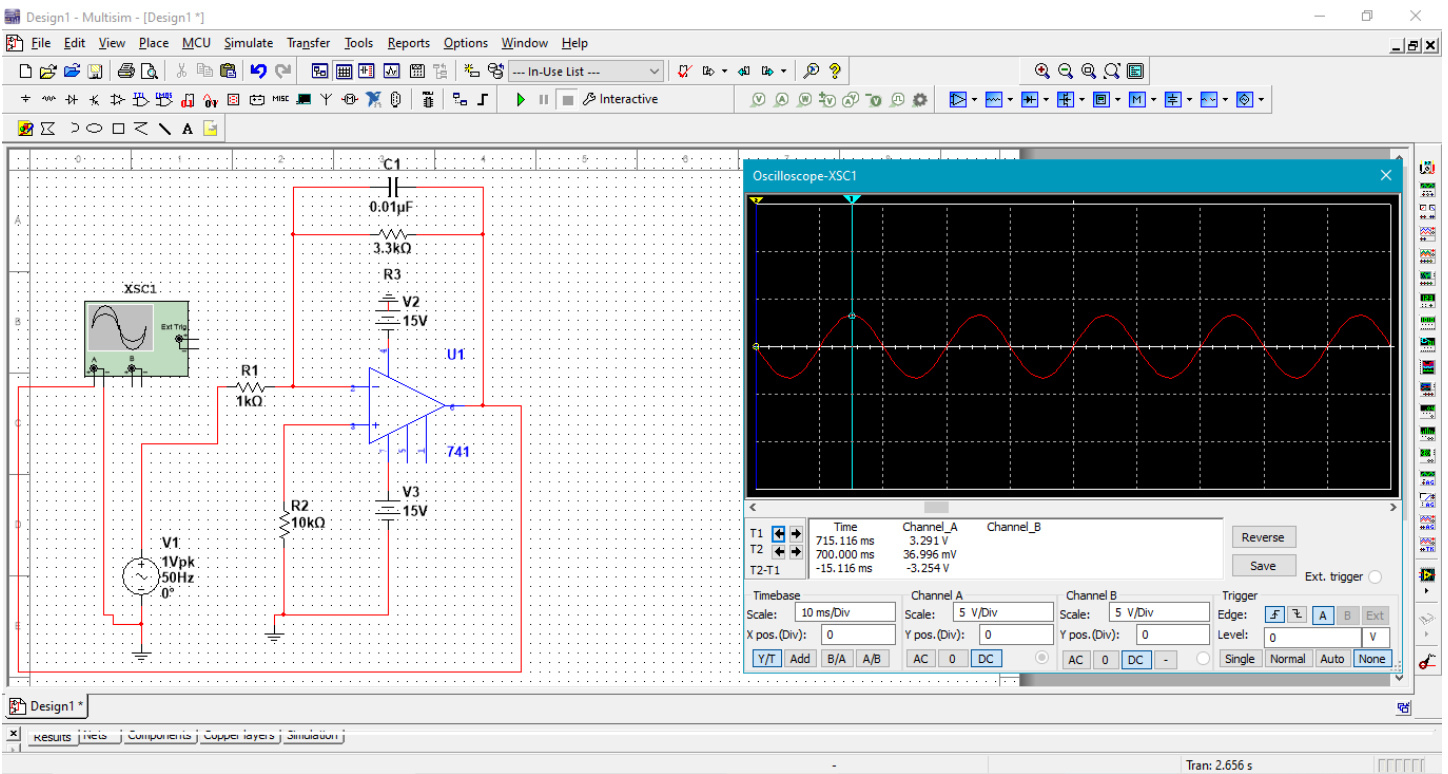

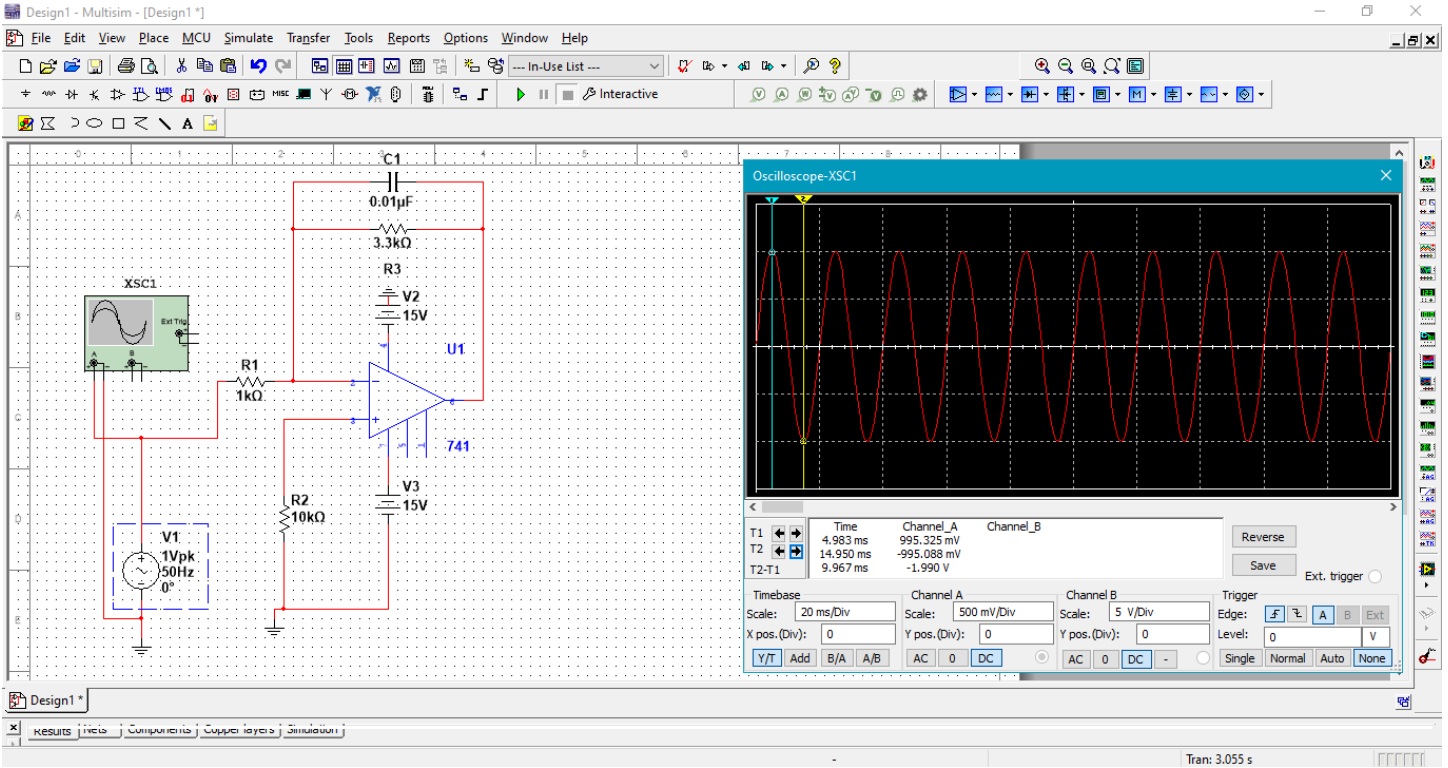

1. Construct the circuit shown below, apply a  $2 \text{ V}_{p-p}$  of sine wave.
2. Vary the frequency of  $V_{in}$  from 200Hz to 50KHz. Calculate the gain. And record the results in the Table 1, and then plot the gain vs. frequency on semi-log graph paper.

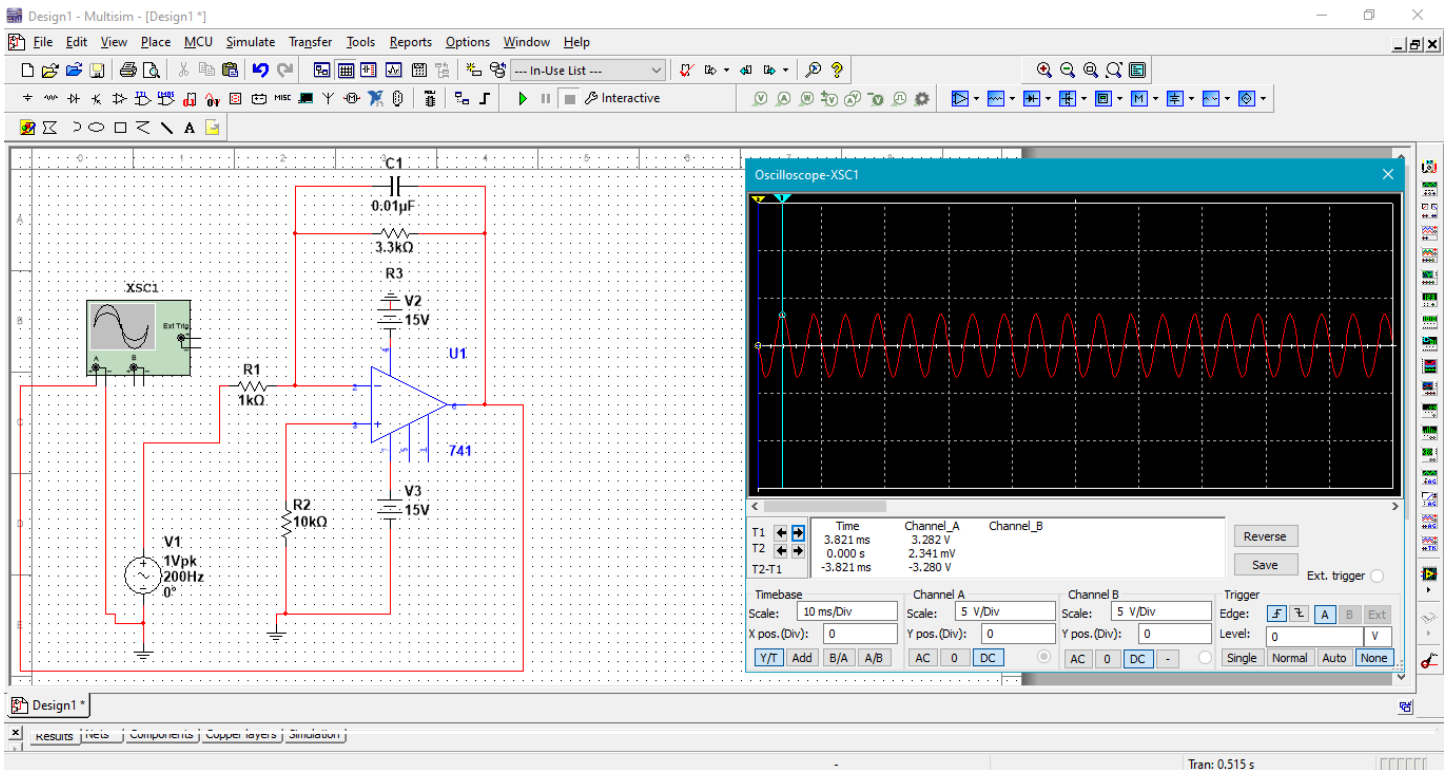

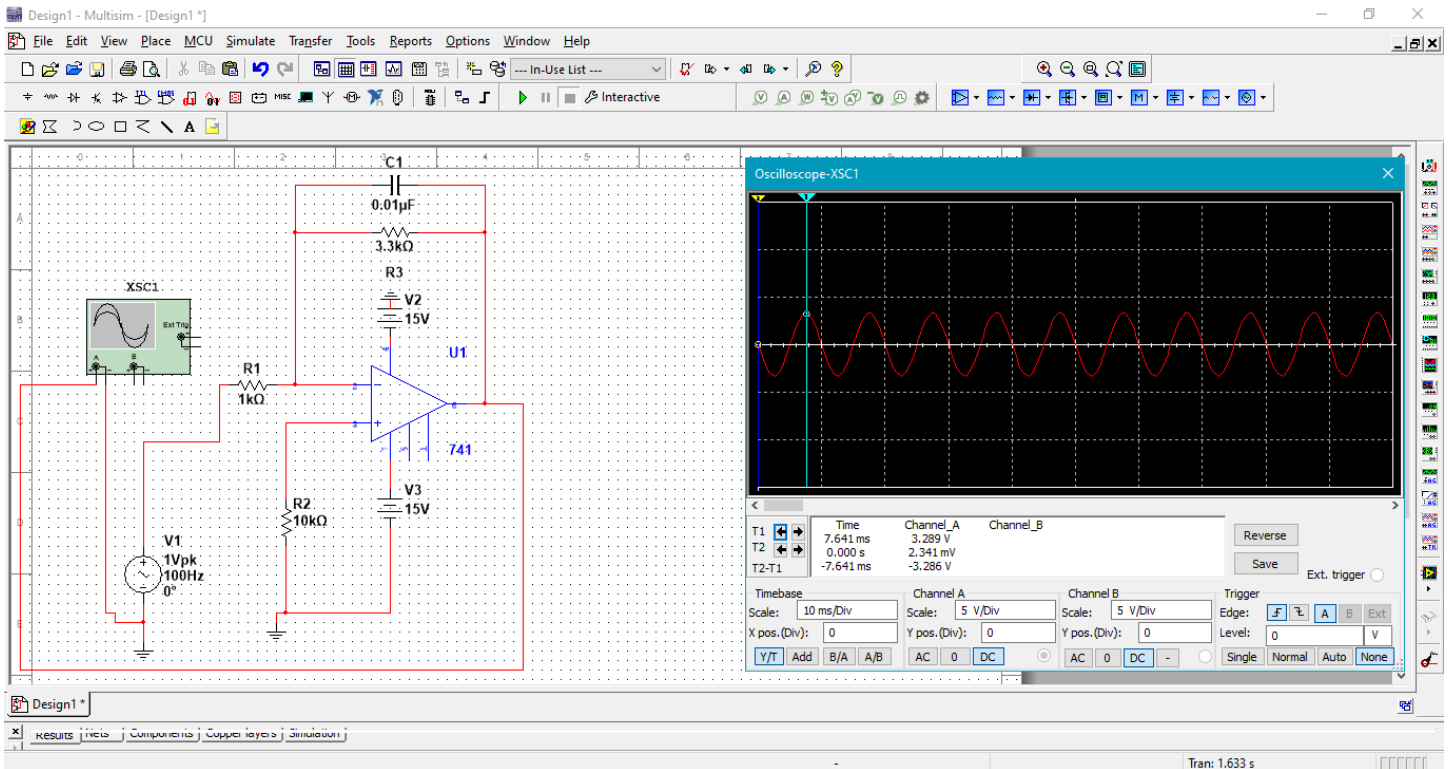

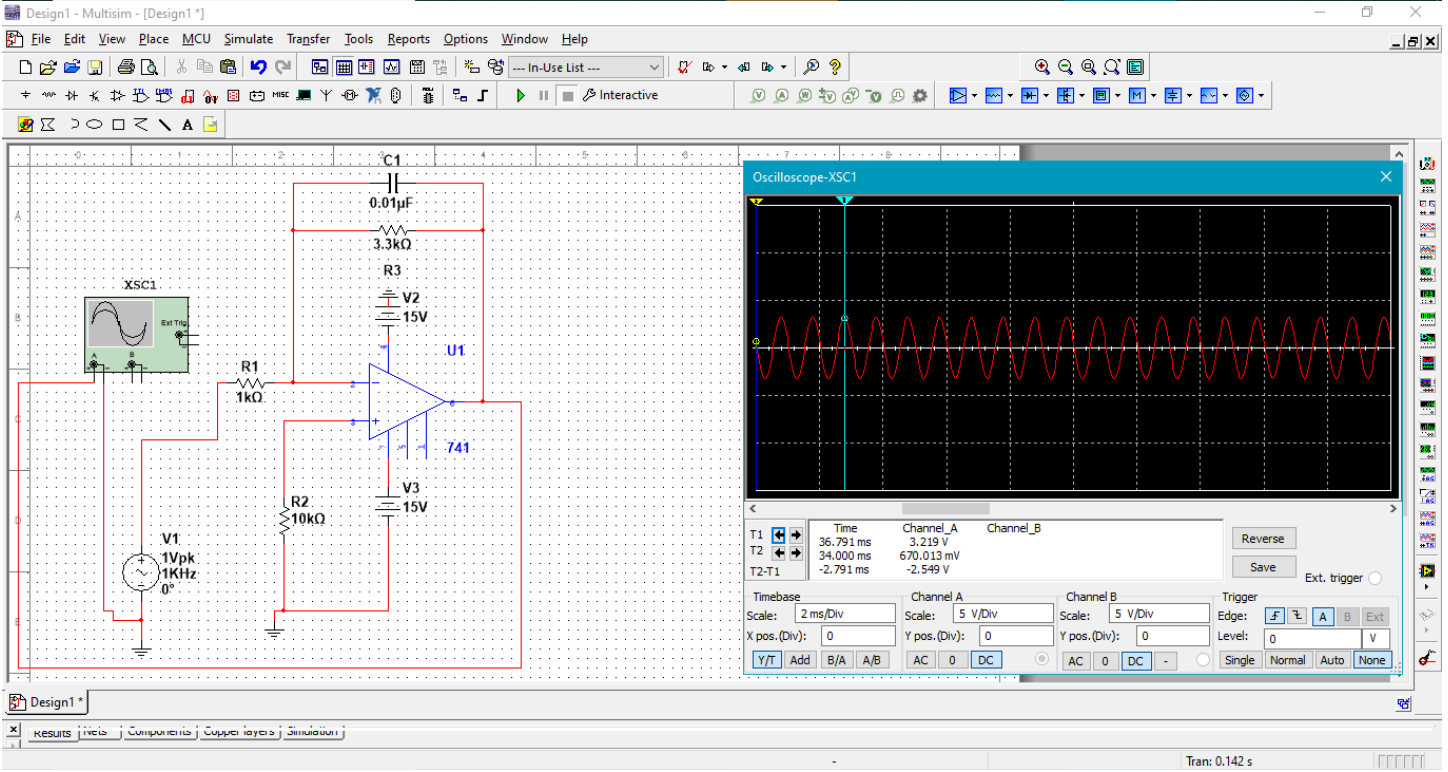

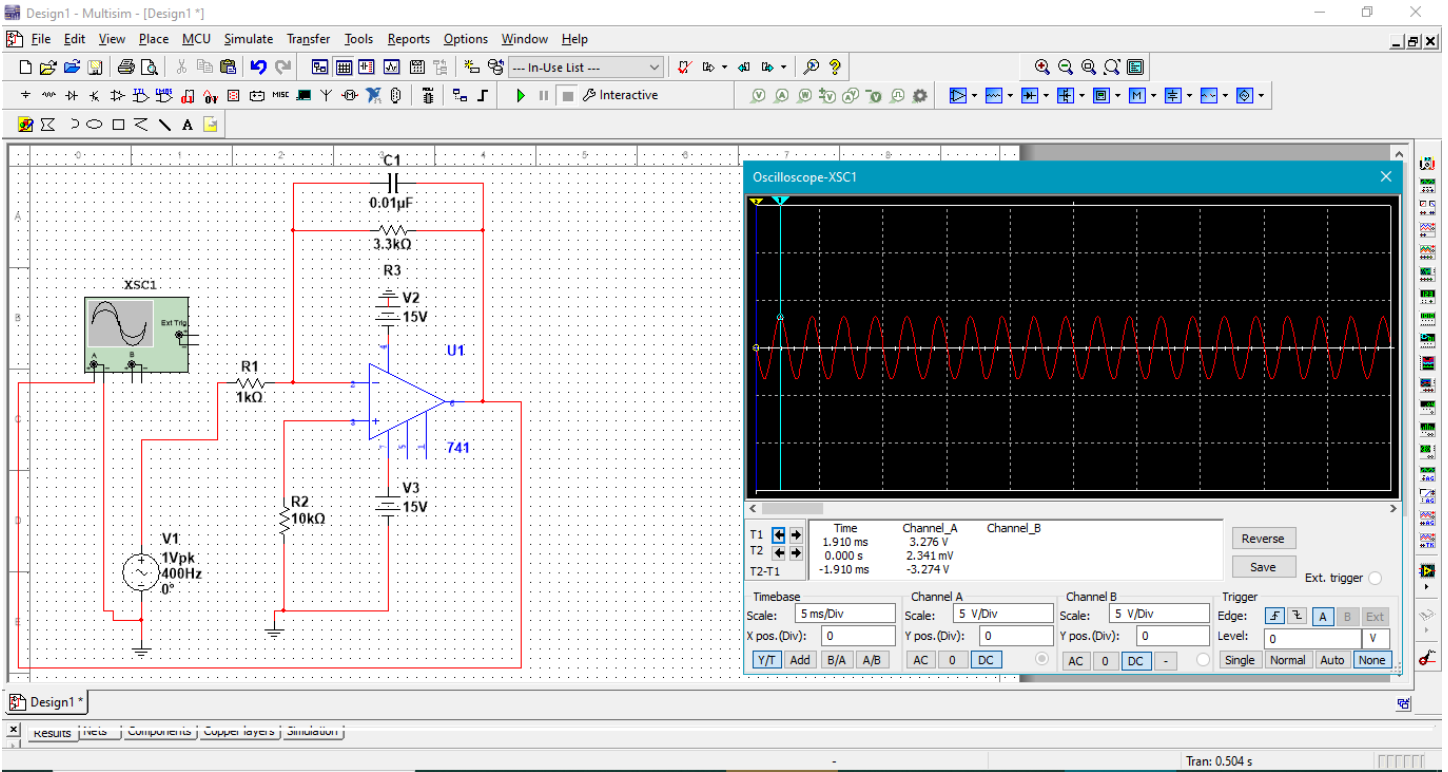

Frequency (Hz)	$V_{in}$ (Volt)	$V_{out}$ (Volt)	$A_v$
50Hz	1V	3.291V	3.291
100Hz	1V	3.289V	3.289
200Hz	1V	3.282V	3.282
400Hz	1V	3.276V	3.276
1K	1V	3.219V	3.219
10K	1V	1.407V	1.407
15K	1V	0.990V	0.99

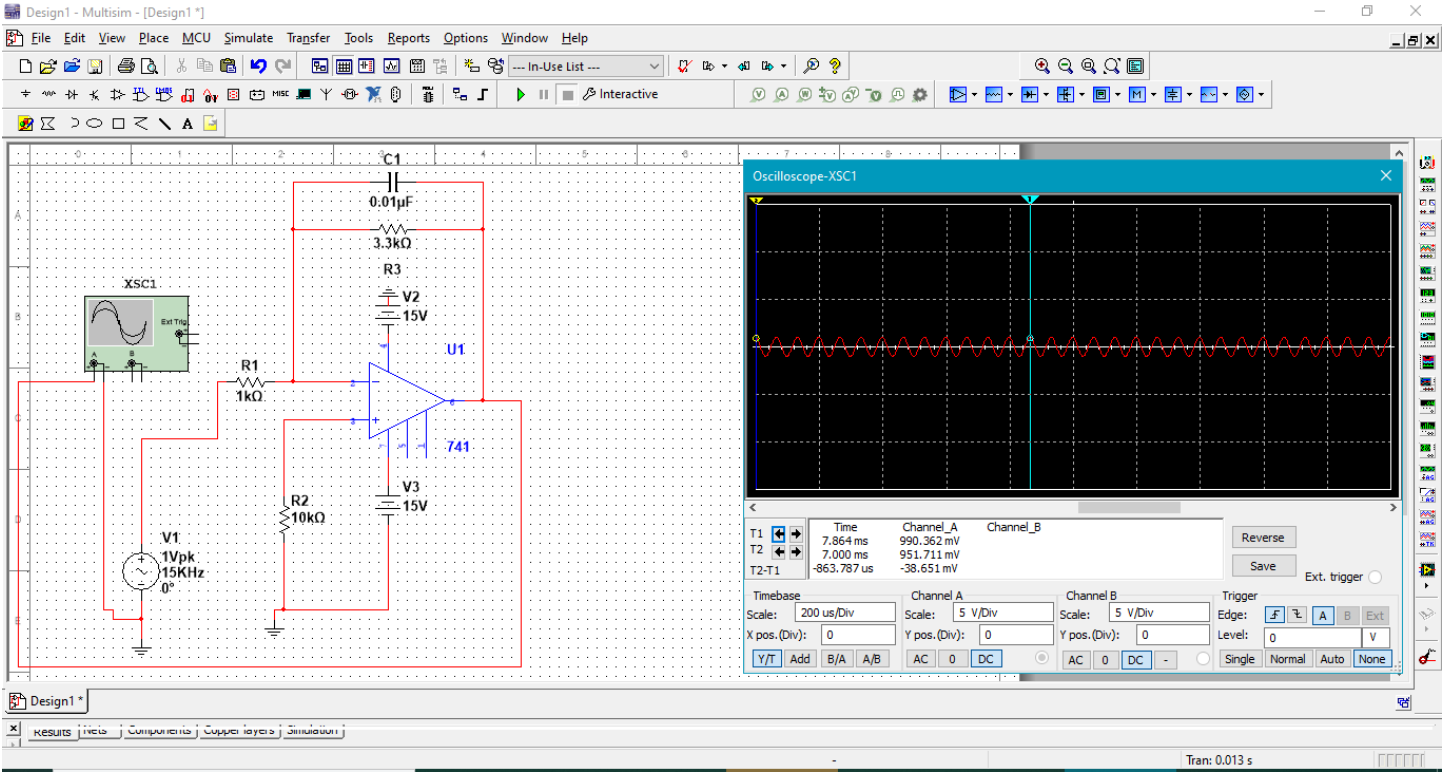

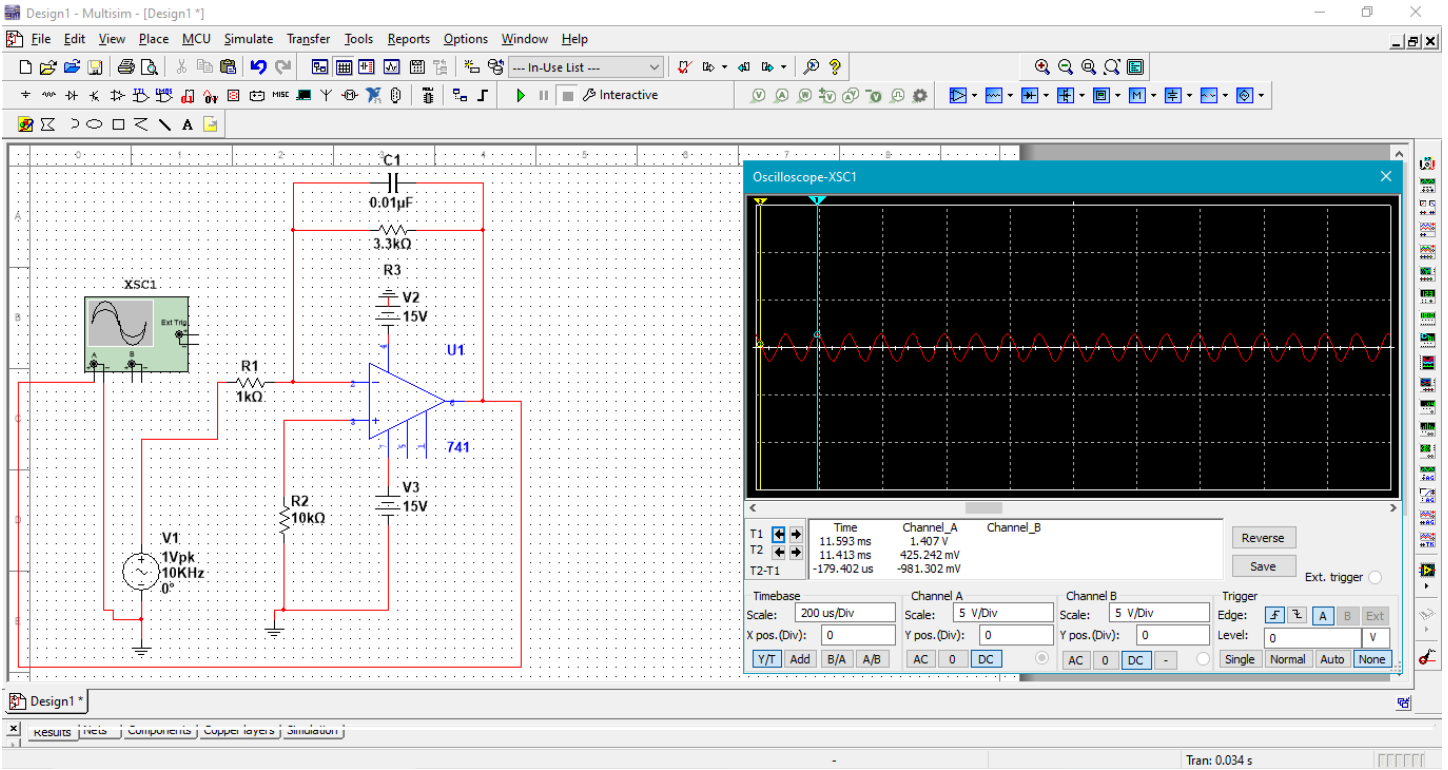

**The Break Frequency of the Integrator circuit  $FB = 1/2 * \pi * C_f * RC = 1/(2 * \pi * 3.3 * 1000 * 10 * 10^{-9}) = 4822.8 \text{ HZ}$**

## Part5: Differentiator

1. Connect the circuit shown. Apply a  $2 V_{p-p}$  sine wave.
2. Vary the frequency of  $V_{in}$  as shown in the Table 2 and record the results.
3. Calculate the gain **and then plot the gain vs. frequency on semi-log graph pap**

Frequency(Hz)	PEAK $V_{in}$ (Volt)	PEAK $V_{out}$ (Volt)	$A_v$
200Hz	1V	2.671V	2.671
1K	1V	8.123V	8.123
2K	1V	9.333V	9.333
6K	1V	9.094V	9.094
8K	1V	8.569V	8.569

The Break Frequency of the differentiator circuit  $FB = 1/(2\pi \cdot R1 \cdot C1)$   
 $(2 \cdot \pi \cdot 1K \cdot 0.22 \cdot 10^{-6}) = 723.4 \text{ HZ}/1 =$
